

Innovative Material Handler Safely Moves Loads up to 2,500 lbs. (1,100 kilograms)

The LoadRunner™ optimizes manpower by making heavy load movement ergonomic and safe for one operator. The LoadRunner utilizes on-board compressed air and air casters to 'float' the load across the floor. This movement method reduces friction and virtually eliminates damage to the load and the floor.

The LoadRunner effectively assists or replaces traditional material handling equipment including hand trucks, pallet jacks and forklifts. It is ideally suited for manufacturing, cleanrooms, assembly, testing, and warehouse applications requiring recurring load movement.

LoadRunner* features:

- Lightweight and maneuverable operation
- Durable machine design
- No damage to floors or loads
- Low insertion height for easy loading
- Low profile deck design
- Deck size 42" wide x 49" long (1,067 mm wide x 1,245 mm long)
- Intuitive throttle-style fingertip controls
- Aero-Caster technology
- Easy-to-use

* Patent Pending

The LoadRunner offers ergonomic load movement and precise positioning.
