

How to move heavy loads: a quick note from AeroGo, Inc.

[View this email in your browser](#)

"I don't have to use forklifts anymore.
 The AeroGo product is safe, fast, easy to operate and doesn't scratch our floor."

Maximize Floor Space Utilization with Improved Safety as a Bonus

Moving 42' data center containers through fabrication and manufacturing is easy with Aero-Drive transporters and compressed air. Forklifts are eliminated, floor load is dramatically reduced, and floor space is increased due to the precise positioning realized by air caster systems. Added bonus: improved safety. The system shown here moves containers, sized from 25,000 to 100,000 lbs.in a variety of lengths, but we'd be glad to figure out the best solution for your load moving dilemma. See more examples of what can be moved on air at [this link](#).

If you haven't already tried using the power of compressed air to move loads from 500 lbs. to 5000 tons, give AeroGo a call at 1-800-426-4757 or [live chat](#) with us right now.
